Incident at the IRE in Fleurus : results of the last sampling carried out by the Agency for the Safety of the Food Chain in private vegetable gardens within a radius of 3 km.

03/09/2008

The results of the last sampling carried out by the Agency for the Safety of the Food Chain in private vegetable gardens are again clearly below the maximum doses defined by the European regulations.

- Vegetables : endive, cabbage, grapes, tomatoes, beans... (max. 2000 Bq/kg) :
5 samples : 32, 16, 26, < 3,8, 74 Bq/kg

As a precaution, the governmental crisis centre advises not to eat those foodstuffs until the 7th of September. The observed results will then be even lower.
